

How to Create Pages in Jira

Creating pages in Jira helps document product requirements, meeting notes, or any reference content. Here’s a quick guide to creating and publishing a page effectively.

Step 1: Navigate to Pages

In the top menu, click on **Pages** as highlighted in the navigation. This will open the documentation dashboard.

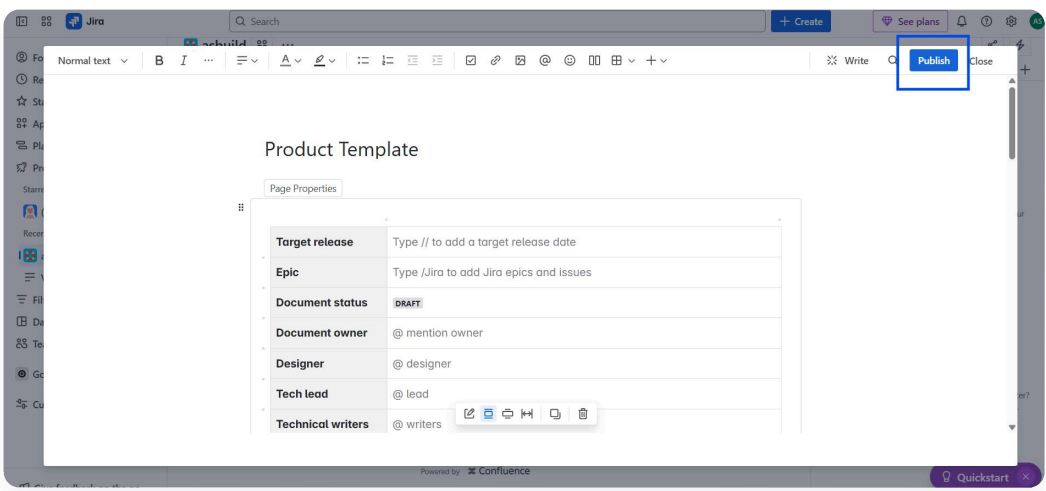

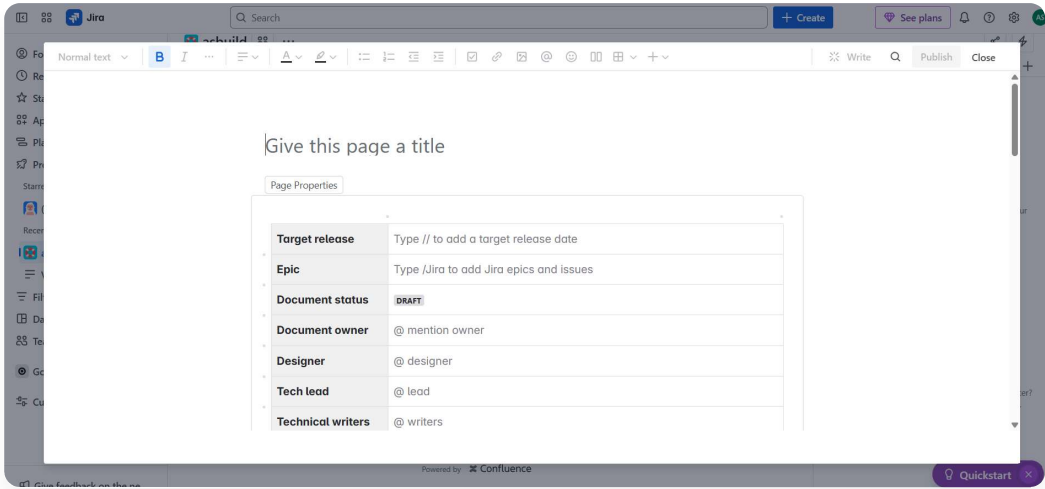

Step 2: Choose a Template

Select a predefined template that fits your purpose or choose to create a **Blank Page**. In this example, the **Product Requirement Template** is selected.

Step 3: Add Content and Format

A new window will open. Enter a meaningful **Title**, detailed **Description**, and structure the page content as per the requirement. Once completed, the page will auto-save periodically.

Step 4: Publish the Page

When you're ready, click on the **Publish** button. Your page will now be publicly available within the project space and accessible to your team members.

That’s it! Your page is now live. You can go back and edit it anytime or collaborate with team members on it.
