

# How to Add Custom Status Transitions in Jira

Jira boards by default offer three statuses: **To Do**, **In Progress**, and **Done**. Follow these steps to add a custom column and status transition.

## Step 1: Add a New Column

As shown in the snapshot, click on the **+** icon available on the board to create a new column.

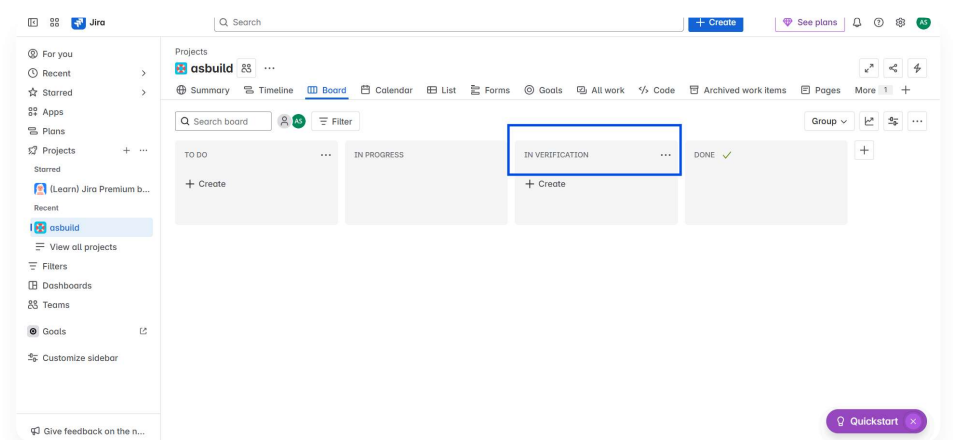

## Step 2: Enter Column Name

Once the field appears, type the name of the new column — e.g., **"In Verification"** — and press **Enter** to create it.

## Step 3: Column Created

Your **"In Verification"** column is now added. To reorder columns:

- Hover over the column tab
- Click and hold it
- **Drag and drop** to your desired position

Your board now reflects a custom status flow, providing improved visibility for QA, approvals, or other review stages.
